

Assumptions / Clarifications

Each car has an assumed cost per day

We are assuming that each customer is utilizing vehicle protection through our agency. Similar to how Enterprise offers products like damage waiving and liability protection

VehiDet_Type is another registration identifier, similar to how a vehicle has a VIN Number. But instead, this 3 digit code is the agency's unique identifier for the vehicle, and can be a combo of letters and numbers

reserv_hadaaccident assumes a value of 1 if the customer gets into an accident during their rental period.

Customer has cleared all requirements to rent a car (Eg. has a license, is a legal resident of the country)

It is possible to overpay or underpay a payment, as the customer may be using a pay-by-day payment method. Overpaid bills will have the extra amount re-imbursed at some point in the year.
